

RAVEN

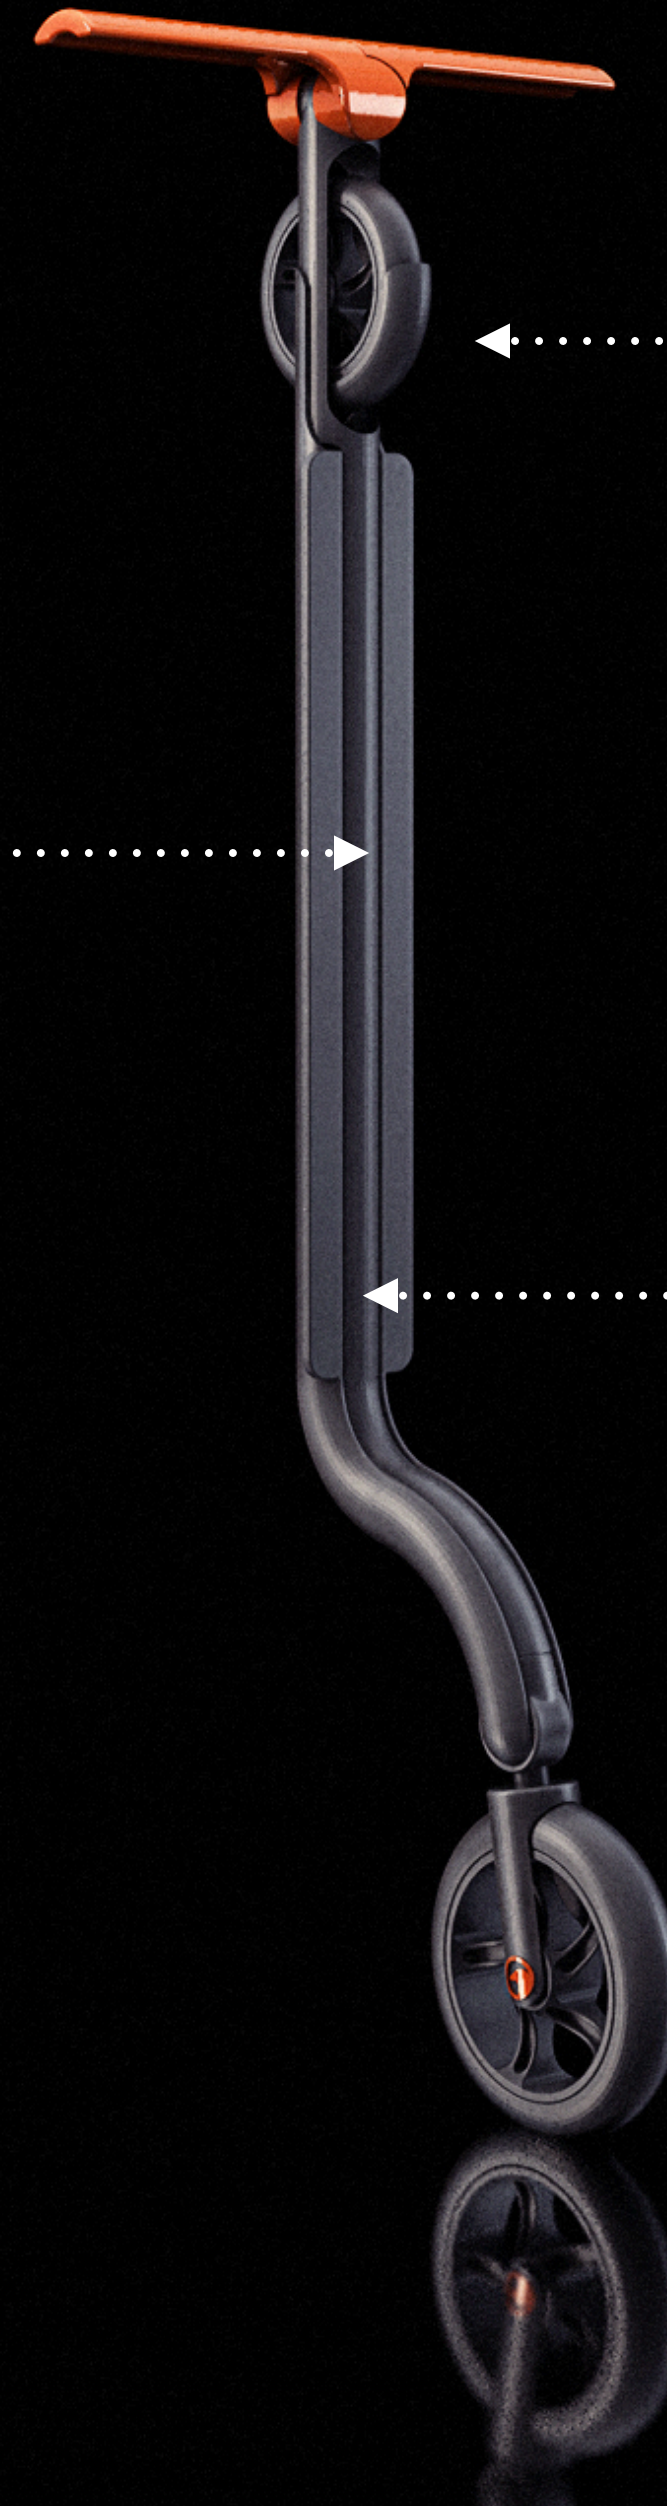

kickscooter

Folds to an absolute flatpack.

Folds to an absolute flatpack.

The handlebar has been designed to cover the rear wheel for the reason of locking the scooter in a public places when it is not in use

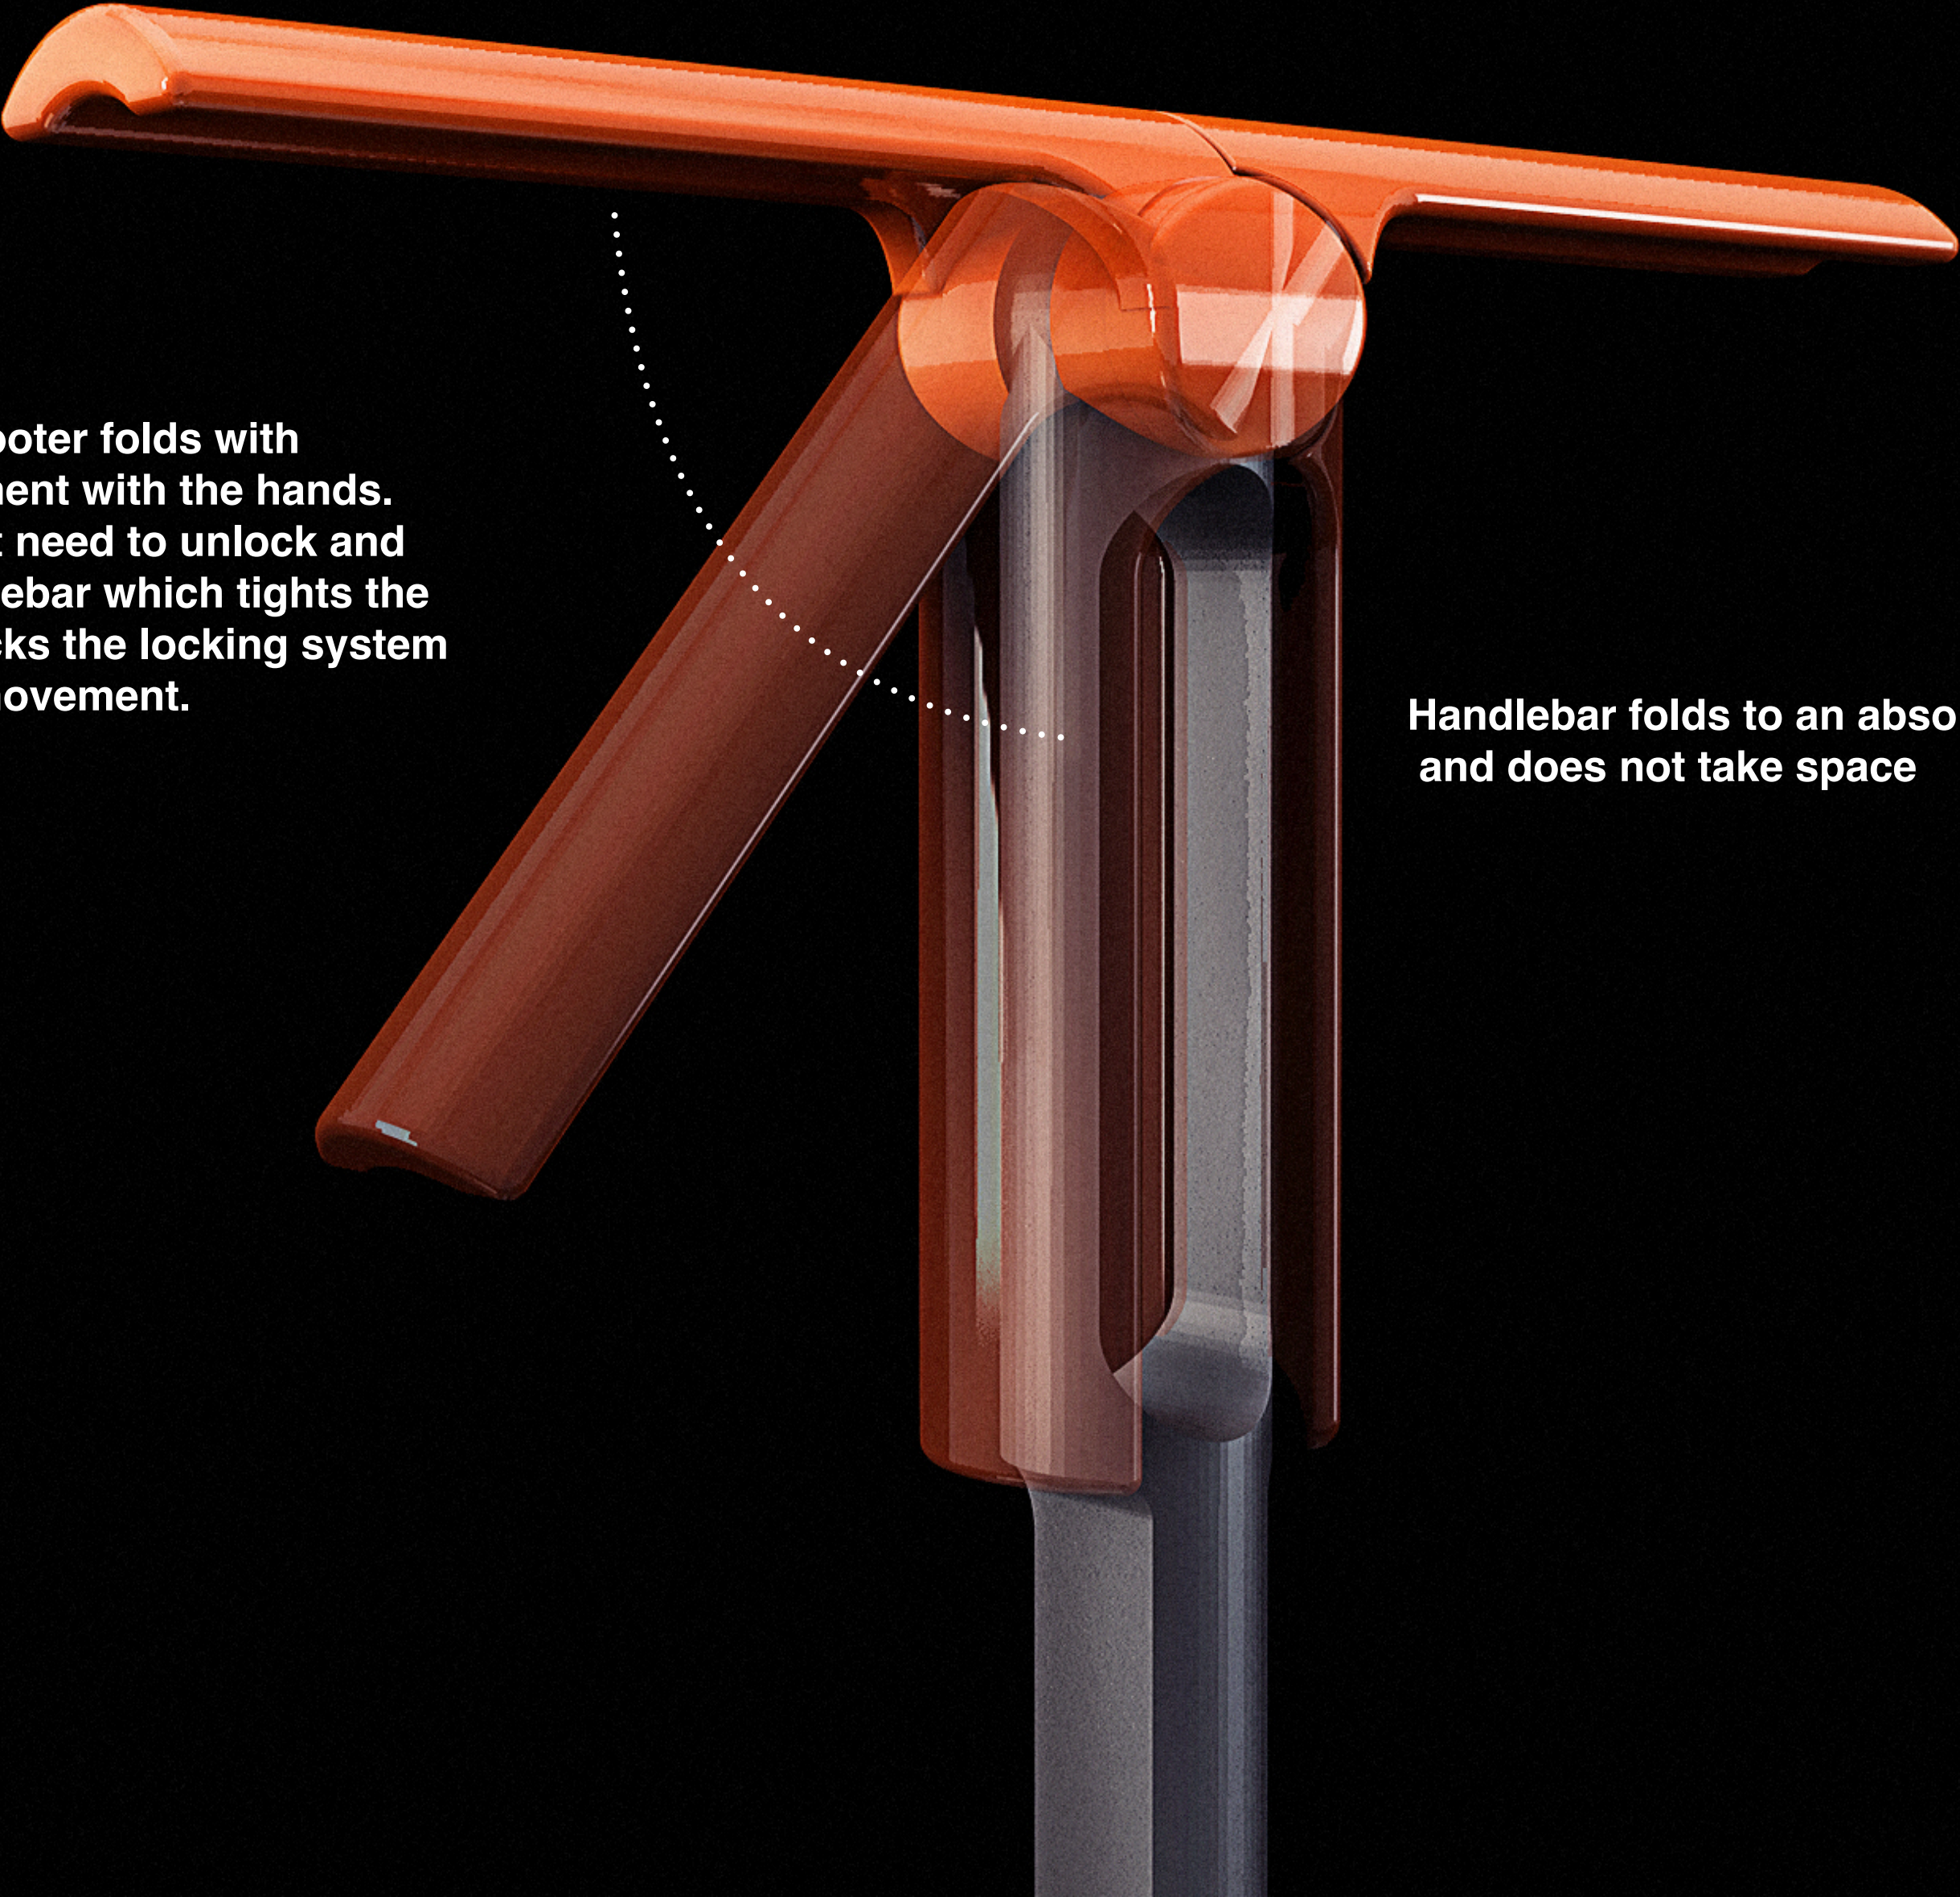

New material: Carbon fiber gives more luxurious feeling, super light construction and better stability.

Innovative gap in a middle of the Raven

Inside the gap there are the holes which makes Raven more lighter and helps to not collect the dust or dirt inside

RAVEN kick scooter folds with just one movement with the hands. Consumers just need to unlock and rotate the handlebar which tightens the cable and unlocks the locking system only with one movement.

Handlebar folds to an absolute cylinder and does not take space

Easy foldable locking system.

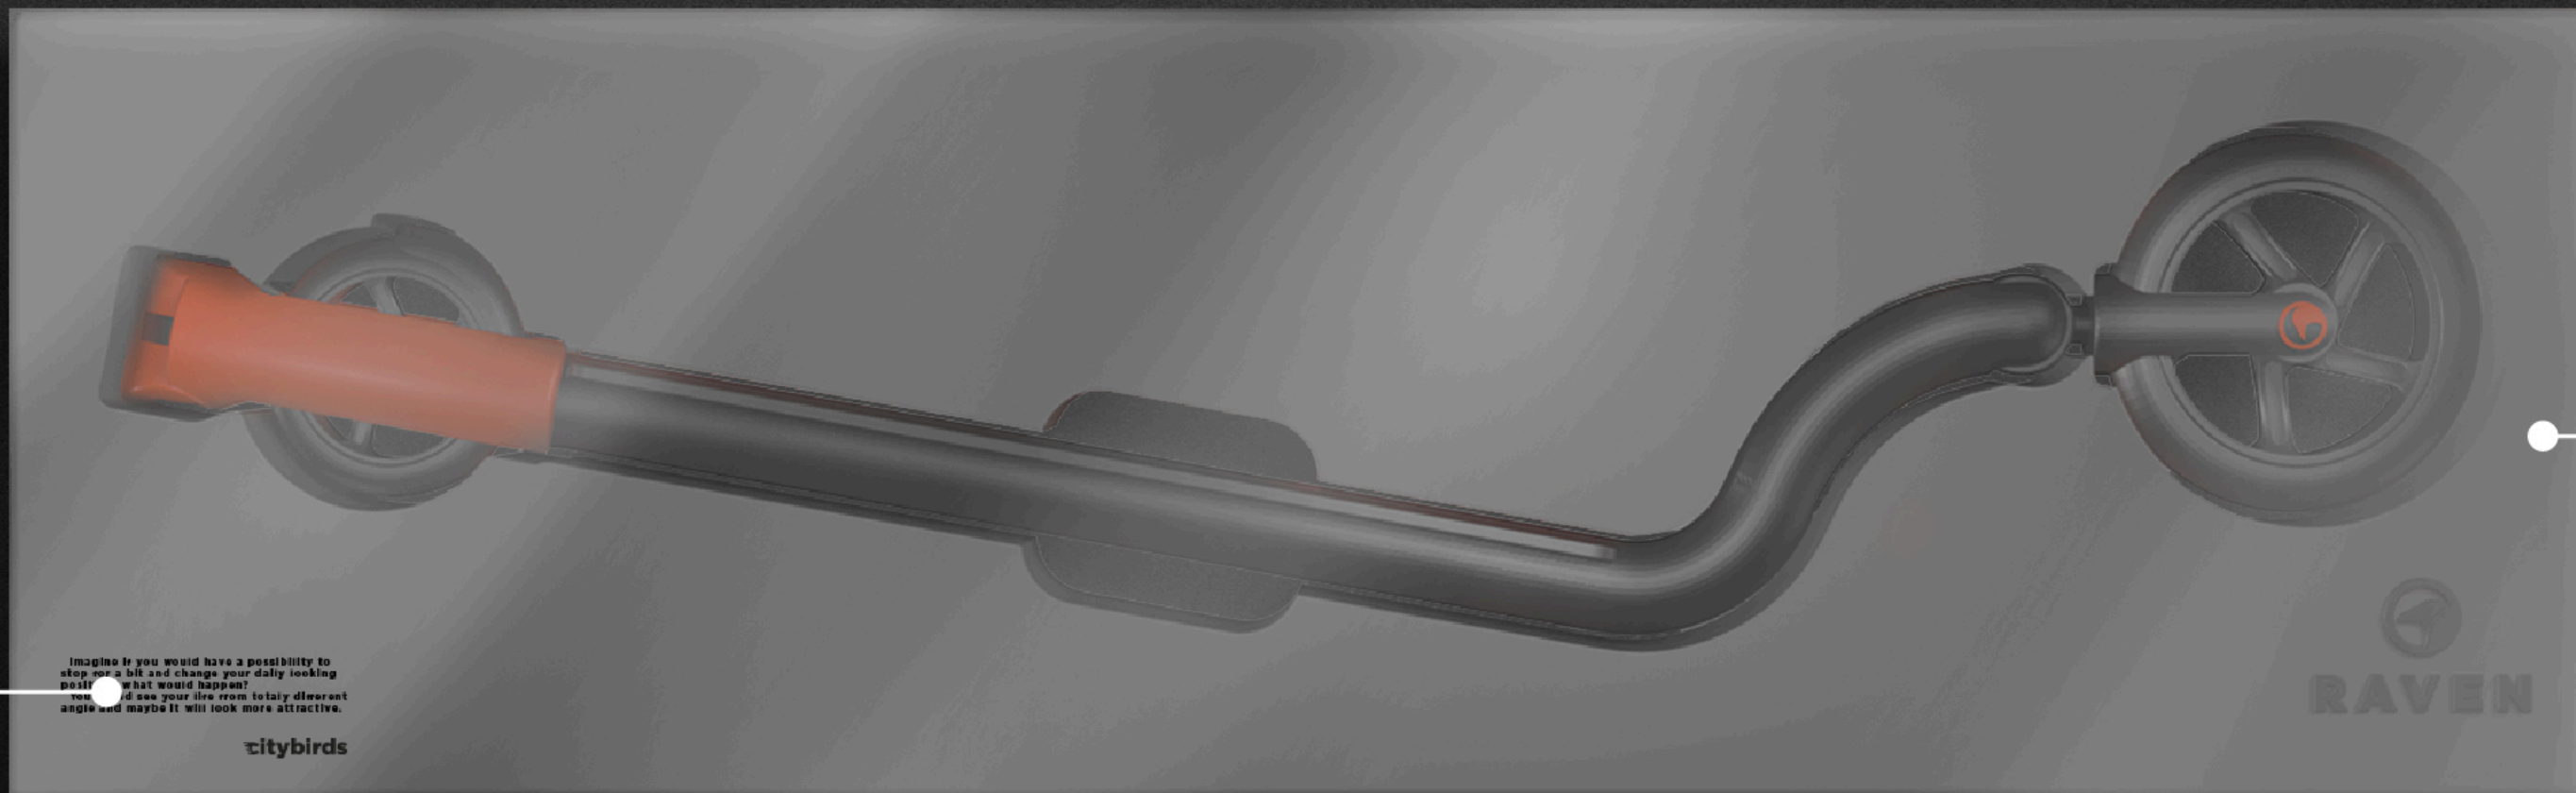

1. Black protective foam

2. Silkprinted RAVEN logo
On the protective foam

3. Printed information
on the top layer

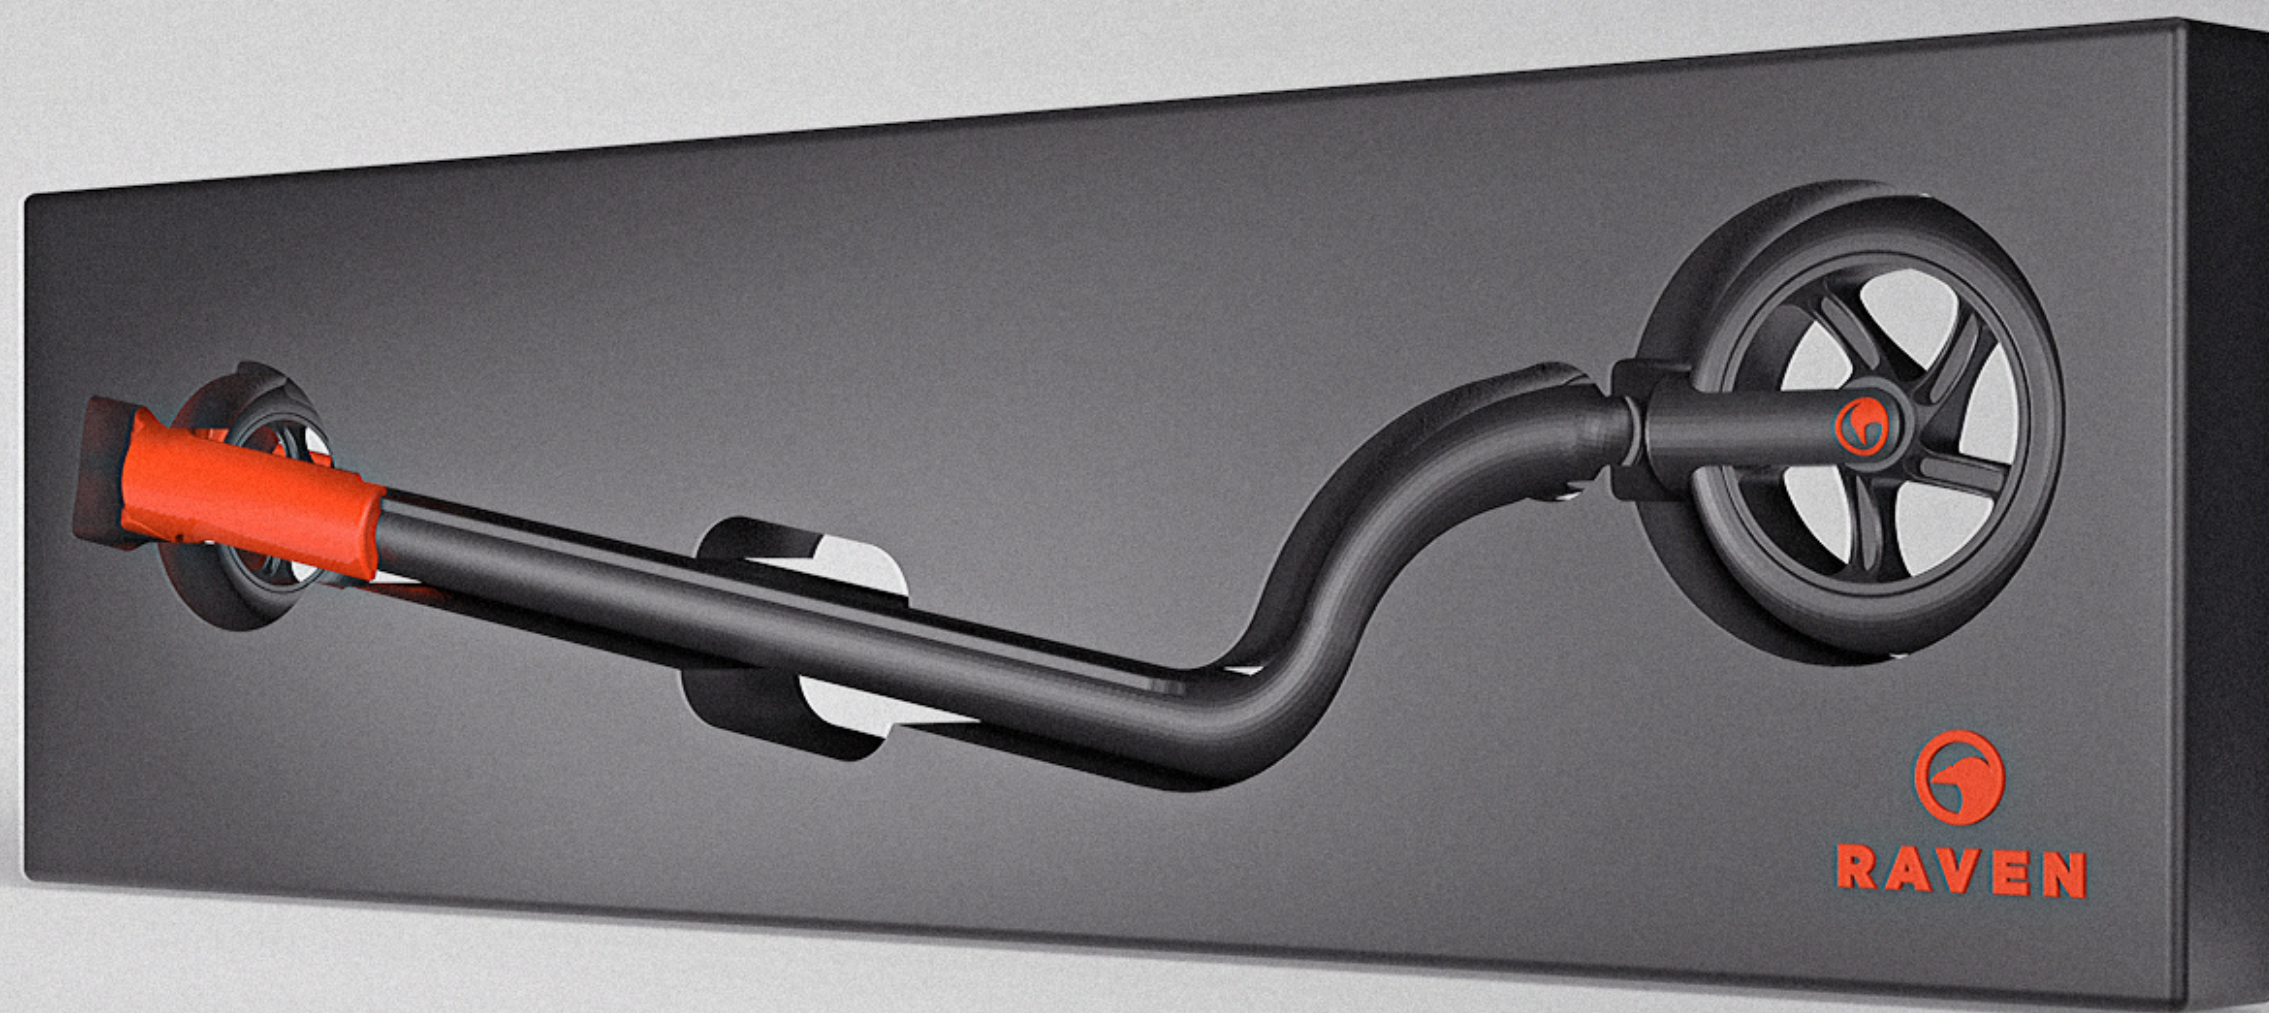

4. Top layer is the PE plastic cover

Imagine if you could have a possibility to
stop on a hill and change your daily walking
mode. What would happen?
You would see your life from totally different
angle and maybe it will look more attractive.
citybirds

Consumer are able to use the packaging
like a storage place for the Raven scooter.

Protective foam has two hookers on a back
side so you can easily hang it on a wall.

THANK YOU !
